

# Expand your data with bMark™

We help you find upside potential

DEMO

belltree

## Experts in Upstream Data Management

bMark™ benchmarks are instrumental in evaluating energy reserves and development metrics in a data-driven manner.

## Powerful Database

How can the Oil and Gas industry leverage analogue data to enhance performance?

At Belltree, our team's global experience is complemented by the unparalleled power of bMark™, which enables us to provide our clients with comprehensive technical insights.

## Behind the scenes

Play ► The story behind one of the most innovative solutions in [#Upstreamanalytics](#), what was the spark that initiated Belltree to develop bMark ?

UPSTREAM ANALYTICS

# What our Clients are saying

Having worked with Belltree delivering a benchmark study to assess opportunities on our B305 asset in Angola we are pleased that active pursuit of the recommendations from the study relating to increased reservoir throughput via re-activation of waterfloods and improvements in production efficiency from existing well stock has enabled material increases (~30%) in production performance through 2023.

Further gains and sustaining production performance is anticipated as we continue to increase injection rates and further work is being undertaken on production wells and our infrastructure through 2024. The vast datasets used by Belltree to robustly benchmark the assets performance against a robust set of analogues was key to enable focus on the key drivers for improved performance and delivery.

**Increases (~30%) in production performance through 2023.**
